(see diagram Below) The system is powered by a lead-acid battery, which is charged by the car's electrical system using a dynamo or alternator. The engine operates contact breaker points, which interrupt the current to an induction coil (known as the ignition coil). The ignition coil consists of two transformer windings — the primary and ...

Just wired up my new test stand (no schematics) and it works (!!!) but the engine continues to run when I turn the IGN switch to the OFF position. I think its because I'm running my alternator field wire through the IGN switch (found some instructions online). Its a 10SI with two posts. Aftermarket HEI distributor.
