TYPES OF POTENTIAL ENERGY When you stretch a rubber band, you do work on it to change its shape. The energy you use to stretch the rubber is stored as potential energy until you release the rubber band. Any object that can be stretched or compressed has potential energy called elastic potential energy. Bungee

CALCULATING WORK FROM FORCE AND DISTANCE To calculate the amount of work done on an object, you must know the force applied and the distance the object moved. Let's look at an example of how to calculate the work done on an object. A crane uses an average force of 5,200 N to lift a metal beam 25 m into

(Metaphysical, not neurological) – a reader who touches an item, person or animal and receives information. For items, the reader is picking up on the energy information transferred to the item; the person/animal having had the most recent physical contact with the item will leave behind energy ‘memories’ as well as energy signatures.
