EMT Paramedic Practice Problems - Varsity Tutors

Using the same problem and the same numbers, let's calculate this Lidocaine drip using the Lidocaine Clock. In order for the math to work properly, you need to ensure that the concentration of Lidocaine you are using is 4 mg/mL (or you have adjusted your math to account for a different concentration) and you need to be using a 60-drop/mL drip set.

Medication Math 101 : Free Training Posts | EMTprep.com

Four studies published since 2000 portray paramedics' drug math proficiency as frighteningly low. 1,2 During one experiment in a simulated high-stress environment, "advanced paramedics" scored only 61% on a series of calculations. 1 That's the good news; less experienced medics averaged not quite 40%. It gets worse.

Gentle Drug Math | EMS World

This means that math still has its place in EMS. The point of doing the math is to end up with an answer in milliliters or drops per minute (gtts/min). This is because our syringes & bags of fluid are measured in milliliters, and we need to figure out how many ml or gtts/min will equal the dose we

want to deliver.

Drug Math Tutorial Part III | Paramedicine 101

A patient is to receive 1000 ml of Normal Saline. For the first 6 hours, the solution is delivered at 85 ml/hour, then the rate is reduced to 70 ml/hour.
